FOR WHOM

Senior staff working in the insurance industry, such as managers of insurance companies, as well as insurance agents and brokers, who wish to learn about Big Data opportunities and develop a suitable data analytics strategy as well as all who seek to understand the changes that Big Data is bringing to the insurance industry.

PROGRAMME HIGHLIGHTS

Big Data has become a ubiquitous term attracting widespread interest in the insurance industry with some citing it as the top disrupter with great impact on the insurance industry.

While the insurance industry has always used historical data for business intelligence, Big Data marks the evolution from descriptive analytics to prescriptive analytics enabling insurance organisations to make decisions based on real-time data instead of historic data, experience, and gut feeling.

This programme covers a broad range of issues relating to Big Data including the Big Data Landscape, the nature of Big Data, modelling concepts and developing a Data Analytics strategy. Through the use of case studies, participants will also examine Big Data opportunities that can be taken advantage of by insurance companies in their various business functions. This is the ideal programme for participants wishing to explore services that go beyond insuring risks by offering active risk management on a forward looking basis.

KEY LEARNING OUTCOMES

By the end of the programme, participants will be able to:

- Understand the term Big Data and its nature.
- Describe the Big Data Landscape.
- Understand how data-driven decision making applies to insurance.
- Identify the four main stages of Big Data adoption including descriptive and prescriptive analytics.
- Understand how Big Data analysis techniques can be applied and the relevant modelling concepts involved.
- Develop a Data Analytics Strategy and manage the challenges accordingly.
- Know the Big Data of opportunities available in the insurance industry.
